

Solve the charging challenge with ALD Charge+

As your fleet transitions to electric vehicles (EVs), you need to plan for a whole new way of vehicle re-fuelling and driver reimbursement.

Forward thinking organisations are making the shift to low-emission fleets, but then facing challenges around providing access to the charging infrastructure, driver reimbursement and more.

To make the transition as easy as possible for your drivers, you'll need to make sure re-fuelling their EVs is as straightforward as possible, whilst ensuring cost transparency for the business.

ALD Charge+ solves the challenge of how to effectively manage charging and reimbursement for your EV drivers.

ALD Charge+ makes the transition to EVs simple for you and your drivers:

-  Allow your drivers to charge on-the-go using the ChargePoint app.
-  Monitor driver charging behaviour – through a single aggregated invoice.
-  Provide home chargers, including installation and maintenance, organised through our partner ChargePoint.
-  Provide access to the public charging network – of 4,000+ charging stations in the UK and 200,000+ across Europe.
-  Keep track of charging costs, as all charging transactions are provided on a single clear invoice.
-  Organise workplace charging directly through ChargePoint.

Why do I need ALD Charge+?

When you switch to an EV fleet you'll find vehicle fuelling and driver behaviour will change. To make the transition from internal combustion vehicles to EVs as easy as possible for your drivers, you'll need to make re-fuelling their EVs as straightforward as possible.

Rather than re-fuelling when the tank is almost empty, your drivers will charge their vehicles whilst they are sleeping, working, having lunch or in a meeting. This then creates the challenge of how to reimburse your drivers for business mileage.

With ALD Charge+, you can set up charging services at drivers' homes and on the public charging network. Your drivers are automatically reimbursed for their home charging costs, while public charging costs are automatically settled directly with the charge point operators.

ALD Charge+ makes life simple for you and your EV drivers.

How ALD Charge+ works

Home charging

ChargePoint will install a charger at your driver's home which connects to the ChargePoint app. The app retains the charging information which has taken place at the driver's home. Reimbursement of any home 'business charging' logged through the ChargePoint app will automatically be sent to the driver with no need for them to submit expense reports. Reimbursement costs are based on actual electricity costs set by the driver but subject to the kWh cap you set. You'll then receive a single aggregated home and public charging rebilling invoice from ALD Automotive.

Public charging

The ChargePoint app connects your drivers to ChargePoint's public charging network. All public charging sessions conducted through the ChargePoint app are settled directly with the charge point operator. You'll then receive a single aggregated home and public charging rebilling invoice from ALD Automotive.

Workplace charging

Through our workplace referral system we put you in contact with ChargePoint who will work with you to install workplace chargers that meet the particular requirements of your business.

The benefits of ALD Charge+

Driver satisfaction

Access to home charging

Give your drivers the ability to charge from home with ALD Charge+. The full charger installation process is taken care of by our partners ChargePoint, with an option to spread upfront installation costs.

Reimbursement for home charging

Automatic reimbursement for home charging costs without the need to submit expense reports.

Public charging

Access to ChargePoint's extensive network of over 4,000 public charging stations in the UK, with payment invoiced directly from ALD Automotive.

Control and visibility

Monitor charging activities

A clear, concise view of home and public charging for all drivers within your fleet.

Simple identification of drivers

Create groups to differentiate between drivers. For example, you can split drivers based on cost centre, subsidiary or department.

Better understand Total Cost of Ownership (TCO)

ALD Charge+ gives visibility of charging data allowing for deep analysis of true EV TCO.

Operational benefits

Simple payment

All charging transactions completed through the ChargePoint app are provided on one single monthly invoice from ALD Automotive, so there's no need to pay multiple charge point operators.

Cost transparency

ALD Charge+ provides a clear picture of re-fuelling costs.

Helps meet sustainability goals

ALD Charge+ is able to collect carbon emissions data relating to the energy used for vehicle charging. This data helps organisations assess their progress towards sustainability goals.

Workplace chargers

Provide the convenience of charging at work with our ChargePoint workplace referral process.

ALD Charge+ Your comprehensive charging solution

ALD Charge+ solves the challenge of how to effectively manage charging and reimbursement for your EV drivers.
